

ShowTime!

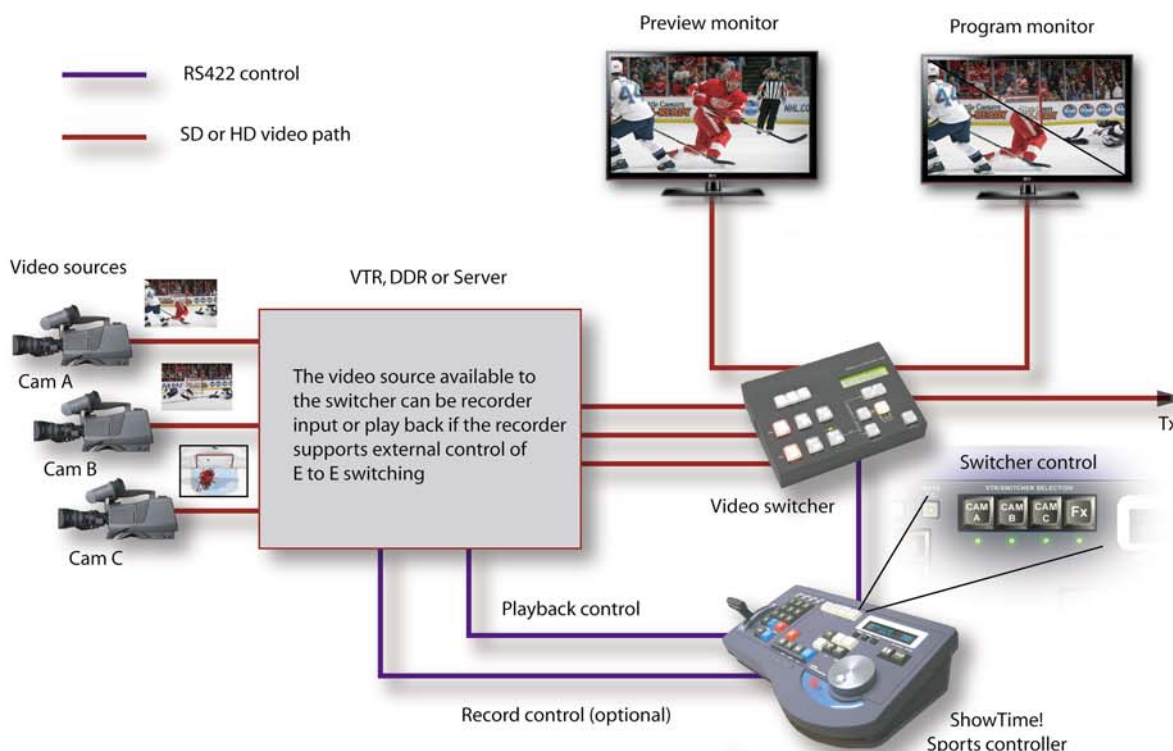

You're in control - from source to server

- Controls any VTR, DDR or Server with industry standard protocols
- Video switcher and record/play control from one control panel
- Compact portable system with quick set-up
- Three video sources or player channels
- HD and SD formats available

You're in control - from source to server

ShowTime! is a cost-effective package combining dynamic server control and live vision switching. Based on proven technology from two leading broadcast hardware manufacturers, ShowTime! brings the seamless integration of live sources and action replay within the grasp of the most demanding budgets. The ShowTime! package comprises Hi Tech's industry standard server controllers, Brick House Video's award-winning digital vision switchers and supporting software at a compelling price.

Operation of the ShowTime! system is straight forward - the video server transport and the switcher source selection are controlled from the Hi Tech panel. A single keystroke both selects a source to the switcher preview bus and sets up playback control for cueing. The original server channel continues playing until a second keystroke switches the previewed source to the program bus. A visual indication of the status of each source is provided to show "live", "previewed" and "taken to air". If the video server supports E to E switching, the control panel can switch between live source video and server channel playback.

ShowTime! provides close integration with the video switcher and the video recorder/player. This allows the operator to control both devices with one button on the ShowTime! control panel.

Video Switcher specification:

- 270Mb/s or 1.485Gb/s HD with 10-bit precision
- Programme & Preview SDI and composite outputs
- 4 x auxiliary SDI relocked outputs
- 3 asynchronous SDI inputs with dedicated frame stores
- Mix/wipe & fade to black functions with vari-speed auto transition
- Internal Test Pattern Generator

ShowTime! control panel specification:

- Three port source and/or server control
- Cut or preset effect transitions
- T-bar for accurate slo-mo control
- Multiple cue point storage
- Switcher and record/playback control protocols built-in
- Clear operator interface for easy use
